What would happen if a killer whale met up with a great white shark? What if they had a fight? Who do you think would win?

SCIENTIFIC NAME OF KILLER WHALE:

“ORCINUS ORCA”

Meet the killer whale, also known as an orca. It is a sea mammal. It breathes air through the blowhole on the top of its head. Just like you, killer whales have lungs. They hold their breath underwater.

KILLER WHALE NICKNAMES:

***BLACKFISH, ORCA, SEAWOLF,
and
KILLER OF WHALES***

SCIENTIFIC NAME OF GREAT WHITE SHARK: “CARCHARODON CARCHARIAS”

Meet the great white shark. It's a huge fish that can't survive out of the water. Sharks and other fish don't breathe air. Fish get oxygen from water that flows through their gills.

Like most sharks, the great white has five gill slits.

GREAT WHITE SHARK NICKNAMES:
MAN-EATER, TOMMY, WHITE POINTER,
and *WHITE DEATH*
