Buried Sunlight **How Fossil Fuels Have Changed the Earth**

By Molly Bang & Penny Chisholm

What are fossil fuels, and how did they come to exist? This engaging, stunning book explains how coal, oil, and gas are really “buried sunlight,” trapped beneath the surface of our planet for millions and millions of years. Now, in a very short time, we are digging them up and burning them, changing the carbon balance of our planet’s air and water. What does this mean, and what should we do about it?

Ages 4-8

The 4th book in this award-winning Sunlight Series does not disappoint!

“I love this book because the beautiful illustrations and straightforward text offer a soft scientific explanation about energy production. The extra information in the back gives parents a starting point for talking about climate change.”
